Pre class:

What's next? Week 6

In Week 6, we will shift our attention to information, data, and governance, exploring how information collected through stakeholder engagement can be managed responsibly and how concepts such as Indigenous Data Sovereignty and the CARE Principles can guide ethical, rights-based decision-making.

Ahead of workshop 6, using the outputs from workshop 5, prepare a short team pitch and further develop your engagement thinking.

As a team:

- Refine your priority stakeholders and stakeholder rationale.
- Develop engagement approaches for each priority stakeholder.
- Consider how the 5 Rights influence those engagement approaches.
- Identify the key questions you would like engagement activities to help answer.
- Prepare a <5-minute pitch for Class 6 with a single slide -- please note all team members do not need to present to the class.

Your pitch should briefly explain:

- the project chosen
- your priority stakeholders
- proposed engagement approaches
- any key assumptions or uncertainties

Please place the slide on a page in the team's Canvas area called "Class 6 pitch" -- this needs to be done at least 24 hours before your class, unless your tutor advises that they need it earlier.

To prepare effectively for the next week, complete all outstanding learning content for this topic, before navigating to week 6.

Approach	Right People	Right Place	Right Language	Right Time	Right way
Consultation and meeting with the elder and education and others	This helps identify the people that represent the organization or the community.	This helps identify the right location that would be suitable for meeting.	This helps us plan an approach on how the language should be set for the meeting as formal or informal so that we can respect the community members and the others at the meeting.	This helps us plan the meetings so that it would not cause any problems for the community members and the others with their daily tasks.	How can you get in contact with the person without disrespecting the community of elders or the other members and organizations.

Approaches:

Families and community	Child educators'/support staff	Elders	SNAICC	Users	Kids in early youth center
Have the kids take a letter to their parents so that you can set a meeting with the families in the community	Send an email to the child educators and the support staff for a meeting to discuss new technology	Approach the people of the aboriginal community so that you can set up a meeting with the elders	Contact the origination Member through their services and contact numbers so that you can setup a meeting with the representative member	Send a survey to the people that use your technology	Assembly for kids in center

Key questions?
“how can we keep data safe and secure from attackers, specifically data regarding young users?”
“How can the technology help deepen connection to culture?”

Assignment work:

Workshop 6 activity

Criteria	Ratings					Pts
Feedback review	**1 to >0.75 Pts** **Proficient** Thoughtfully evaluates feedback received, identifies assumptions, gaps, or opportunities for improvement, and explains meaningful decisions to change, clarify, or retain aspects of the proposal. Strong evidence of collaborative discussion, including effective methods for grouping and prioritising feedback.	**0.75 to >0.5 Pts** **Developing** Responds to several feedback items and identifies useful improvements or clarifications. Evidence of discussion and collaboration.	**0.5 to >0.25 Pts** **Satisfactory** Records feedback and some responses, but analysis is limited or incomplete. Limited evidence of collaborative discussion.	**0.25 to >0.0 Pts** **Needs improvement** Very brief or descriptive response with little evidence of reflection, analysis, or collaboration.	**0 Pts** **No marks** No submission or no meaningful contribution in class.	1 pts
Information governance and responsibility	**2 to >1.5 Pts** **Proficient** Identifies relevant information that may be collected, explains why it is needed, considers risks or governance issues, and proposes appropriate approaches for responsible information management. Demonstrates thoughtful and respectful decision-making.	**1.5 to >1.0 Pts** **Developing** Identifies several relevant information types and associated risks. Demonstrates some consideration of responsible management and governance.	**1 to >0.5 Pts** **Satisfactory** Records some information, risks, or management approaches, but consideration of governance or responsibility is limited.	**0.5 to >0.0 Pts** **Needs improvement** Very brief or incomplete response with little consideration of risks, governance, or responsible handling.	**0 Pts** **No marks** No submission or no meaningful contribution in class.	2 pts

marking criteria

Case study copy paste:
Grafton community centre:
Grafton South Aboriginal Early Years Centre is an Aboriginal community-controlled early childhood centre located in Grafton, NSW. The centre supports families from nearby communities, small settlements and outlying properties. The centre offers long day care,

preschool/kindergarten, family support, transition-to-school activities, cultural learning programs and referral connections to health and community services. Like many Aboriginal and Torres Strait Islander-led early childhood services, it aims to help children grow up strong in culture, connected to family and community, and ready to thrive at school.
The centre is led by community and governed through an Aboriginal community-controlled structure. Staff include educators, Aboriginal family support workers, a centre director, visiting allied professionals and local cultural knowledge holders. The service is respected because it is seen as a place where children are not only cared for and educated, but also valued, affirmed and supported in their identity. SNAICC's current guidance makes clear that Aboriginal and Torres Strait Islander-led early childhood education and care services play a distinctive role in strengthening cultural identity, supporting families facing vulnerability, and integrating learning with health, family and early intervention supports. As part of its future planning, the centre is exploring how technology may help support its operations and services while maintaining a culturally safe, child-safe and community-led approach. The centre has engaged your team to help understand organisational priorities, stakeholder needs and opportunities for future technology support before any technology decisions are made.

Questions/feedback asked by other groups:

1. Did you consider that the majority of the children are young
2. Is technology directed to the staff or kids more?
3. How are the stakeholders ordered?
4. Is further expansion possible? Is that part of the initial plan or added afterwards?
5. Regarding meetings, how would you work around cultural events to find the right time and place?
6. Should be more focused on the stakeholders, not the product
7. How should data be gathered during meetings?
8. Did you consider conflicts in focus groups?
9. Kids can use technology just fine
10. How will we control the app?

Feedback and review:

Which questions identify gaps in our engagement plan?

The question about the age of the kids using the program, how conflicts in intrest will be handled, and how we plan to work around cultural events all identify gaps in our plan

Which comments challenge our assumptions?

The slideshow should have been focused about the engagements with stakeholders not the product itself

Which questions are already addressed by our evidence?

How will we control the app?

Which questions suggest missing stakeholders, perspectives or engagement approaches?

Which feedback should influence our final proposal?

Table

Feedback	What does this help us notice?	What will we change, clarify, or keep?
Did we consider the age of children to be 5 or below? Do families want kids to use tech at an early age?	We should work on explaining how we are using the program, empowering their learning with technology as a small part of the education	Change how we describe the program as an idea Clarify what the program aims to do
To whom is the technology directed to kids or educators? Or both?	Both stakeholders have different wants and need which shapes how the engagements occur as well as the program	Keep both opinions of stakeholders and how their contribution to how we shape the platform
Order of stakeholders and how did we decide it?	How our stakeholders impact the brainstorming of the solution	The order is prioritized by the with whom with would collect data for our project.
Is scalability of our technology into other schools a fundamental agenda or an upcoming upgrade?	If the technology is useful there should be an attempt to expand it as it could be a very useful platform in theory	That we should initially focus on how we can implement it to the early care Centre before we look at how we can introduce the solution further out into the community
Have we considered the Right ways, Right place for approaching the elders and community?	This helped us notice that the ways we approach stakeholders could be changed to more accurately match the 5 rights	Set meetings and study group at an approved place from a list of right places with right people to represent the community: Elders, staff, SNAIC, devs Using right ways and prioritizing the time of the

		right people. And making sure simple language is used and the matter is understood.
Do not lean into solution right now. Instead look into the collection of data from stakeholders	We were too focused on fixing the problem presented and not the community that would be using said program	Be more succinct on **how** we would be attaining any data instead of already assuming that we know how to 'fix'
How exactly are we going to approach or conduct meetings with the elders and community? Have you thought about the conflicts in study groups?	This question helps us evaluate the different weight that these stakeholders' ideas may bring, and how we can make sure all groups are equally represented	Find the right place to conduct study groups and meetings where their voices are heard. find the right people to work alongside and to represent the community. Figure out the right way to approach
How are we going to restrict sensitive content and how much a kid is exposed to technology?	This would remind us to add control features and UI so only the admins can manage the tech	The technology won't be for the kids per say. They would be enjoying the benefits without actually being exposed to the tech. The educators would be responsible for maintaining exposure and would have final say when and where the tech would be used.

Information governance and responsibility:

Could the same question be answered another way?
With exceptions for protections of data privacy and how we'd gather the data, most of the questions focusing on contacting or the methods we use to gather information from the community can be answered in different ways

Is all of the information necessary?
no, but data such as names are used for clarity

The stakeholders also have a major say in the data that is deemed neccesary

What information should we avoid collection?

Personal data, annecdotes or opinions. We want to collect data as objective as possible to help the kids.

Medical details, individual user data won't be used in the program

What information would be useful for future decision making?

What the kids, staff, elders and broader community find is not up to a good standard in their current system of teaching, such as gaps in learning

Information collected	Why we need it	Risks or concerns	How will we handle it responsibly?
data for staff kids, and administrators	Validate that correct users are using the program	If the data is leaked out to the public, it would be an issue	Encrypt all data, make sure that databases are physically protected
Information on the culture from Elders & community	The solution we propose should accurately reflect the culture and should be embedded in it (with them rather than for them)	Are the people we are gathering the information from an accurate representation of the culture and how would we ensure they're the right people?	Smaller, more focus group/small discussion orientated gatherings, as well as private conferences with more trusted people
Information on Tech useability in education	Could the educators, and whoever can access the data that we collect, put together the data in a way that can be conveyed to the kids	Is the technology providing better education quality	Have monthly review on the technology so that you can improve or Fix issues to improve education quality
