Pre class

In Week 8, teams will build on their systems analysis work by developing user stories and requirements from the people, information, activities and outcomes identified in their case studies.

Ahead of workshop 8, teams should hold their first project meeting, review and refine their system context diagram, confirm the key actors and their goals, and test their process for recording meeting minutes and decisions. Teams should also update their Trello board with questions, assumptions and potential outcomes, and review the Week 8 materials on user stories, requirements and MoSCoW prioritisation so they are ready to begin requirements analysis.

To prepare effectively for the next week, complete all outstanding learning content for this topic, before navigating to week 8.

Update trello board (screenshot)

Workshop assessment criteria:

Workshop 8 activity

Criteria	Ratings				Pts
User stories	**1.5 Pts** **Proficient** Develops a thorough and relevant set of user stories that clearly identify specific actors, meaningful goals and intended outcomes. Represents diverse perspectives, responsibilities and levels of authority grounded in the case study. User stories focus on needs rather than assumed software features. Demonstrates team collaboration through equitable contribution, active participation, constructive discussion and shared development of workshop outcomes.	**1 Pts** **Developing** Develops several relevant user stories with generally clear actors, goals and intended outcomes. Represents a suitable range of perspectives and responsibilities, although some stories may be broad, repetitive or partly solution-focused. Demonstrates effective collaboration through participation by most team members, constructive discussion and contribution to workshop activities.	**0.5 Pts** **Needs improvement** Develops some relevant user stories, but actors, goals or intended outcomes may be vague, incomplete or inconsistently grounded in the case study. Represents a limited range of perspectives or relies on unsupported assumptions. Demonstrates some participation in team discussion and workshop activities.	**0 Pts** **No marks** No submission or no meaningful contribution in class.	1.5 pts
Requirement prioritisation	**1.5 Pts** **Proficient** Applies MoSCoW prioritisation consistently and appropriately across the identified requirements. Priorities demonstrate clear consideration of user needs, intended outcomes, responsibilities and the case-study context. Must Have requirements are genuinely essential to the proposed solution. Demonstrates team collaboration through equitable contribution, active participation, constructive discussion and shared decision-making, as observed in class.	**1 Pts** **Developing** Applies MoSCoW prioritisation appropriately to most requirements. Priorities are generally aligned with user needs and intended outcomes, although some distinctions between categories may require refinement. Demonstrates effective team collaboration through participation by most members and discussion that contributes to team decisions, as observed in class.	**0.5 Pts** **Needs improvement** Applies MoSCoW categories at a basic level, but prioritisation is inconsistent, unclear or only partly aligned with user needs, outcomes or responsibilities. Demonstrates limited evidence of collaboration, with some participation in discussion and contribution to workshop activities, as observed in class.	**0 Pts** **No marks** No submission or no meaningful contribution in class.	1.5 pts
					Total points: 3

Case Study Copy Paste:

Grafton South is an Aboriginal community-controlled early childhood centre located in a

rural/regional town and supporting families from nearby communities, small settlements and outlying properties. The centre offers long day care, preschool/kindergarten, family support, transition-to-school activities, cultural learning programs and referral connections to health and community services. Like many Aboriginal and Torres Strait Islander-led early childhood services, it aims to help children grow up strong in culture, connected to family and community, and ready to thrive at school.

The centre is led by community and governed through an Aboriginal community-controlled structure. Staff include educators, Aboriginal family support workers, a centre director, visiting allied professionals and local cultural knowledge holders. The service is respected because it is seen as a place where children are not only cared for and educated, but also valued, affirmed and supported in their identity. SNAICC's current guidance makes clear that Aboriginal and Torres Strait Islander-led early childhood education and care services play a distinctive role in strengthening cultural identity, supporting families facing vulnerability, and integrating learning with health, family and early intervention supports.

The centre wants to improve its day-to-day systems by introducing a simple digital platform that can support:

- enrolment and family contact information, with culturally respectful consent processes
- attendance tracking and follow-up when children miss sessions, in a supportive rather than punitive way
- family communication through plain-language reminders, notices and updates
- documentation of learning, cultural activities and transition-to-school planning
- secure storage of child, family and service information in ways that support privacy, child safety and community trust
- a simple service dashboard to help staff understand participation patterns, waiting lists, transport needs and family support priorities without using deficit language or creating harmful labels

The centre wants a solution that is community-led, child safe, culturally safe, practical, low-burden and secure. It does not want a "tech-first" system that increases administration, weakens relationships, or stores information in ways families do not understand. That concern is well-founded: Australian guidance on early childhood and child safety emphasises that cultural safety, family involvement, privacy, child wellbeing and safe physical and online environments all matter in organisations working with children.

Assignment task 1: ASSESSED

user stories

2 per person

At least 4 different actor types (Kid, Teacher, Elder, SNAICC, Parent)
add to trello under User Stories, 1 user story per card

Slater

As a teacher, i want a simple system so that I don't waste time on administrative work

As an elder, i want an eco-centric development process so that our environment does not suffer because of the program

Josh
As SNAICC, I want the development of early childhood programs designed, governed and delivered by Aboriginal and Torres Strait Islander people and assured safety and wellbeing of Aboriginal and Torres Strait Islander children

As Parents, I need the UI to be easy to navigate so I can easily understand what my child needs to catch up on and communicate when they can't attend.

Jermaine
As a kid, I want the technology that is going to be implemented to not be distracting so that I can retain the most information in my classes

As the SNAICC, I want to engage and amplify the voices of Aboriginal and Torres Strait Islander children, youth, families, communities and the sector so that progress towards the fulfilment of Aboriginal and Torres Strait Islander children's rights are met

Het
As a kid, I want new technology to help me improve my learning habits and my learning capabilities so that I can be successful when I go to school.

As an elder, i want new technology to help people learn about cultural knowledge and how to respect cultural heritage so **that cultural** knowledge and cultural heritage is not lost to time.

Ahmed
As a Parent/Guardian, I want clear communication alongside knowing my child's information is safe, so I can be informed of their learning while protecting their privacy

As a child, I want my achievements in learning (grades) to be stored so it can be shared with my family

Activity 2:

What must the system do?

Using user stories, ask what must be done to achieve user story

Slater
As a Teacher, I want a simple system so that I don't waste time on administrative work

For this, the system must be efficient and not have unnecessary steps and windows that waste the user's time.

As an elder, i want an eco-centric development process so that our environment does not suffer because of the program

For this, the system must not be resource intensive and not take up much server spaces, as this will make it more eco friendly

Joshua

As SNAICC, I wish to see proper representation of Aboriginal and Torres Strait Islander people, and the technology is designed, governed and delivered to them. Giving importance to the rights of the Aboriginal and Torres Strait Islander people to control their data and ensure safety of their children.

For this, the system must be created with 5 rights guidelines, and data collection must be done after approval.

As Parent, I need the UI to be easy to navigate of behalf on my child and catch up in his lessons.

For this, the system needs to be user-friendly and straight to the point, also compactible across wide platforms.

Het

As a kid, I want systems to help improve my study and time management.

For this, the systems will need to be prepared with a time management system like a timed test or due before so that they can learn about time management.

As a elder, I want the cultural knowledge to be protected and respected.

For this, you must have a meeting with the elders to learn proper way to respect the cultural knowledge, and then you must have a secure storage for the data about the Cultural knowledge.

Activity 3: ASSESSED
Requirement prioritization

Use MoSCoW reference

MUST have

Attendance records

Information for students to catch up on missed work

Dashboard for basic navigation

Parental contact information

Children's personal information secured

SHOULD have

Enrolment form

Waiting lists to contact teacher

Reminders

Respectful and inclusive language

Include cultural learning activities

COULD have

Form for transport needs

Family support number

A way to view/update my childs' information

Video Lessons

WONT HAVE

expansion capabilities to other towns

Professional UI

Sharing kids data without consent/permission

Replacing face to face learning with the technology

Activity 4a:
come up with 2 silent solutions

Sharing with the group

Combine or collaborate on ideas

Select 3 meaningfully different concepts

4b:
compare solutions against criteria:
Supports outcomes

Meets must have requirements

Supports control and sustainability

Appropriate for context

Proposed solutions:
Online learning catchup system

Meets most MUST requirements, not parental contact

supports control and sustainability

Supports outcomes

Attendance program, sends catchup emails to kids that are absent

Meets MUST requirements

Supports control and sustainability

Doesnt support outcomes

Website similar to canvas that acts as a hub to learning materials, attendance records, contacts, etc.

Meets MUST requirements

Supports control and sustainability

Supports outcomes
